COMPLETED - DEC 2025

GOOGLE UX DESIGN CERTIFICATION
COMPLETED - JULY 2025

SUMMARY

Software Engineering Technology student with a strong foundation in web development, system design, and technical problem solving. Experienced in building and configuring full-stack applications and workflow-driven systems using modern tools and frameworks. Demonstrates the ability to adapt quickly, troubleshoot issues efficiently, and contribute to both development and IT support environments.

PROFESSIONAL EXPERIENCE

FREELANCE WEB DEVELOPER — JANUARY 2025 – PRESENT
Self-Employed / Contract — Toronto, ON

- Designed and developed a custom booking website for a landscaping business to streamline client scheduling and service requests
- Integrated Calendly, Zapier, and Google Sheets to automate booking, confirmations, and data tracking
- Reduced manual scheduling work and improved operational efficiency through automation
- Built responsive user interfaces using React for desktop and mobile compatibility
- Deployed and maintained the application using Firebase Hosting
- Collaborated directly with the client to gather requirements and implement feedback

FULL E-COMMERCE PLATFORM
Personal Project

- Developed a full-stack e-commerce application using React and Firebase with real-time database integration
- Implemented secure user authentication, product catalog management, and dynamic shopping cart functionality
- Integrated Stripe payment processing for handling transactions
- Designed responsive and user-friendly interfaces optimized for performance across devices
- Structured backend data for scalability and efficient state management
- Applied component-based architecture and reusable UI patterns
- Utilized GitHub for version control and project management

IT HELP DESK TICKET SYSTEM
Personal Project

- Built a ticket management system to track, prioritize, and resolve user-reported issues
- Implemented ticket creation, status updates, and administrative dashboard functionality
- Designed workflow logic to simulate real-world IT support processes
- Structured data to manage users, tickets, and issue categories efficiently
- Focused on usability and clear interface design for both users and administrators
- Demonstrated troubleshooting, system organization, and problem-resolution skills
